Phil Journal, No. Part 19, p. 189, &c. t See an interesting paper from tho MS. Journal of John navy, M. O. F. R. S. on the Specific Gravity and Temperature of Sea Water, made during a voyage from Ceylon to England in 1819-90, published in the Edinb. Phil. Journal, No. SO, for April 1824. TEMPERATURE OF SEA, &c. These experiments will prove, that between the tropics, and in the temperate Zones at sea, when the warmth of the temperature of the atmosphere exceeds that of the surface, the superficial water is generally warmer than that at certain depths fieneath it; and, in all probability, the greater the depth, the colder the fluid in such case. On the 23d of February, in latitude 52 S. and about the longitude of 50 W.--Captain Krusenstern says, the temperature of the air was 12 Reaumer, of the surface 10; and at the depth of 55 fathoms, 8\$; the whole depth at the time being 75 fathoms.--On the 9th of March, in latitude 50 20 S. and longitude 72 45 W. the temperature of the air was 4 Reaumer; the surface 21; at the depth of 60 fathoms,. 2i; and at 100 fathoms, On the 24th of May, 56 miles south of the Equator, and m longitude 146 16 W. the temperature of the air and the surface were equal TM 221; and at the depth of 100 fathoms, 12i.--On the 22d of June, on the tropic of Cancer in the Pacific, the temperature of the surface of the1 sea was 20 5 Reaumer; at the depth of 25 fathoms, 19 5; at 50 fathoms, 17 2; and at 125 fathoms, 13 3 min. so that there was here a progressive difference of temperature of 1 deg. at 25 fathoms, 3 deg. 3 min. at 50 fathoms, and 7 deg. 2...
