

Natural history of New York Volume 6, v. 3

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1859 Excerpt: ...the dorsal valve broken off, showing the triangular cavity beneath the beak of the opposite valve. Fig. 1 6, c. Ventral valves of this fossil: the one filled with stone, showing only the triangular cavity A; and the other having the stone removed by weathering, showing the cavity A and the septum B, presenting the common character of this fossil as seen upon the weathered surface of the Lower Pentanierus limestone of the Lower Helderberg group. Fig 1 rfi Dorsal valve, showing the entire extent of the cavity formed by the dental lamellae, and the central septum below. Fig. 1 e. Lateral view where portions of both valves are removed, showing the extent of the dental lamellae or spoon-shaped cavity A as shown in fig. 1 d, the central septum, of the ventral valve B, and one of the septa D of the dorsal valve, which becomes free at its extremity. Fig. 1 f. Interior of the hinge; X, E, the line of junction of the two valves. The septa of the upper or dorsal valve correspond to the extension of the dental lamella or sides of the spoon-shaped cavity in the lower or ventral valve. Fig. 1 g. Dorsal view of a cast, showing the septa D, D; the cast of the triangular cavity beneath the beak of the ventral valve A. Fig. 1 k. Cardinal view of the same, shewing the form of the cast filling the triangular cavity beneath the beak A, and its extension below into the central septum, which in the cast divides the valve into two parts. The lines of the two longitudinal septa of the dorsal valve are marked D, D, as in the preceding figure. Fig. 1 i. Cast of the ventral valve, showing the longitudinal septum B. Fig. 1 k, I, m. Profile, ventral and front views of an extravagant specimen, which shows bifurcating

plications upon the mesial sinus and fold.
