

Entre los primeros materiales fabricados por el hombre, los materiales ceramicos han experimentado en los ultimos tiempos, una revolucion tecnologica que ha perfeccionado y multiplicado sus aplicaciones, desde los mas variados e indispensables objetos que nos acompanan y ennoblecen nuestra vida domestica, hasta las sofisticadas realizaciones en la microelectronica, la navegacion espacial y otros aspectos que constituyen la base de nuestra moderna civilizacion, ademas de su uso como medio de expresion artistica y cultural. Pese a su gran variedad de composiciones, estructuras y aplicaciones, el enfoque unificador permite hoy racionalizar su estudio e incluirlos en la gran categoria de los materiales inorganicos no metalicos, abarcando asi los materiales ceramicos tradicionales y avanzados, los vidrios, los refractarios, los cementos y muchos otros cuyo numero va creciendo dia a dia. El proposito de este libro es dar un panorama sintetico y ordenado de este conjunto de productos, para permitir a los profesionales de las industrias fabricantes y utilizadores de los mismos, acceder a un texto que puede ayudarles a encontrar soluciones a sus problemas y enfoques para sus proyectos. Esta obra esta tambien dirigida a profesores universitarios y de otros niveles, a estudiantes, a ingenieros de planta y quimicos de laboratorio, y tambien a artistas y artesanos que utilizan estos materiales como medio de expresion. Para quienes se desempeñan en otras areas de la industria, la ciencia y la cultura, Los Materiales Ceramicos, les permitira acceder a la informacion que necesitan.
