

Catalogue of the fossil birds in the British Museum (Natural History)

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891 Excerpt: ...type species. Founder upon a humerus, which is about half the length of that of *Colymbus septentrionali*. Hob. Europe (France). From the Lower Miocene (Upper Oligocene) of Allier. *Colymboides anglicus*, Lydekker (n. sp.). Known by the coracoid, which is considerably more than half the size of the corresponding bone of *Colymbus septentrionalis*. Hab. Europe (England). 30330. The left coracoid; from the Upper Eocene (Lower Oligocene) of Hordwell, Hampshire. The type figured in woodcut 43, with a restoration of the missing process on the posterior border of the distal extremity. The contour of this specimen accords very closely with that of *Colymbus* (compare Milne-Edwards, *Oiseaux Fossiles de la France*/ pl. xlvi. figs. 4-5), exhibiting the same curvature of the head, with a long articular surface for the furcula, the same great expansion of the distal extremity, on which the broken surface for the attachment of the process on the posterior border is distinctly visible. The surface for articulation is of the narrow form, with the large upward extension on the inner aspect of the bone characteristic of the family. Hastings Collection. Purchased, 1855. *Lolyniboides anglicus*.--Ventral aspect of the left coracoid; from the Upper Eocene of Hordwell. Letters as in fig. 23 (p. 84). 30330. The imperfect anterior portion of a sternum probably referable to this species; from Hordwell. The left coracoidal groove fits the preceding specimen. In the presence of a deep concavity in the middle line between the coracoidal grooves, the inner surface of this specimen agrees with the sternum of *Colymbus*, to which it approximates in the slight development of

the episternal process. Hastings Collection. Family AhCIDJE. The tarso-metatarsus is not compressed laterally, and ...
