

California NanoSystems Institute

Please note that the content of this book primarily consists of articles available from Wikipedia or other free sources online. The California NanoSystems Institute is an integrated research center operating jointly at UCLA and UC Santa Barbara whose mission is to foster interdisciplinary collaborations for discoveries in nanosystems and nanotechnology; train the next generation of scientists, educators and technology leaders; and facilitate partnerships with industry, fueling economic development and the social well-being of California, the United States and the world. CNSI was created by Governor Gray Davis as part of a science and innovation initiative, it was established in 2000 with \$100 million from the state of California and an additional \$250 million in federal research grants and industry funding. At the institute, scientists in the areas of biology, chemistry, biochemistry, physics, mathematics, computational science and engineering are measuring, modifying and manipulating the building blocks of our world - atoms and molecules
