Properties of definite integrals Khan Academy The big idea of integral calculus is the calculation of the area under a curve using integrals. Indefinite integrals are the way integral calculus deals with antiderivatives. Therefore, the indefinite integral of e^x is e^x+c , the indefinite integral of $1/x$ is $\ln(x)+c$, the indefinite integral of Integrating scaled version of function. **Integration Calculus (all content, first year) Math Khan Academy** Math AP Calculus AB Definite integrals introduction.
