

STATISTICAL METHODS for Agricultural and Biological Sciences introduces basic statistical concepts as are required for understanding of applications of statistical techniques. There is simplicity in presentation involving no mathematical derivations. All the topics are introduced as well as explained with live examples for the reader to feel comfortable with topics like mean, variance, probability, probability distributions, hypothesis testing, correlation and regression analysis, experimental designs and analysis of factorial experiments which are useful in every scientific investigation that involve data. This is a textbook on statistical methods for post graduate students of agricultural sciences, biological sciences, physical and social sciences and other related disciplines.

Que Es el Tiempo? (Observar La Naturaleza) (Spanish Edition), Differential and Integral Calculus, Mikrostrukturierung am Femtosekundenlaser: Lasermikrostrukturierung von wide-bandgap-Materialien (German Edition), Go to Bed, Blue (Penguin Young Readers, Level 1), The Flying Carpet, Microwave Frequency Synthesizers, Applied Calculus for Business, Economics, and the Social and Life Sciences, Expanded Edition 10th (tenth) edition, Welsh Corgis., McCammon Piano Fortes: How They Are Made (Classic Reprint),
