Composition. When pure, this mineral is composed of carbonic acid 30, and strontia 70. Its formula is SrO.CCv But as it occurs in nature, it usually contains small quantities of lime, baryta, manganese, water, etc. Geological Situation. It occurs in veins of calcareous spar and galena, and in the hydraulic limestone. Uses. This mineral is used in the preparation of the other salts of strontia. LOCALITIES. Jefferson County. Strontianite has been found in radiated masses on Muscolunge lake, where it forms part of the matrix of fluor spar. It has a white and pale green colour, and is fibrous. It is also said to occur at Chaumont bay, in this county. Schoharie County. It occurs in geodes and nests, sometimes of large size, in the hydraulic limestone. The most remarkable locality is in the face of the hill about two miles from the court-house. This variety has a snow-white colour, is compact, and susceptible of a good polish. It was formerly mistaken for common white marble, its true nature having been first pointed out by Dr. Emmons. The specimens which I have examined are nearly pure American Journal of Science, XXVII. 182. carbonate of strontia, containing only a very small admixture of carbonate of lime and oxide of iron. In the vicinity of the court-house, strontianite also occurs in fibrous masses, implanted upon a dark blue calcareous spar. Some of these fibres are nearly two inches in length, and resemble certain varieties of arragonite. Fig. 52. Various crystalline forms have also been noticed at this locality. Of these, Fig. 52, Fig. 53, and Fig. 54, are introduced from Prof. Shepards paper on the Strontianite of Schoharie P on a 120 0; a on a 120 0; o on o 160. Fig. 53 represents a compound form...
