Excerpt from The Book of Wonders: Gives Plain and Simple Answers to the Thousands of Everyday Questions That Are Asked and Which All Should Be Able to but Cannot Answer Fully Illustrated With Hundred of Educational Pictures Which Stimulate the Mind and Give a Birds Eye View of the Wonder No truly great book needs an explanation of its aim and purpose. A great book just grows, as has this Book of Wonders. It began with the attempt of a father to answer the natural questions of the active mind of a growing boy. It developed into a nightly search for plain, understandable answers to such questions as What makes it night? Where does the wind begin? Why is the sky blue? Why does it hurt when I cut my finger? Why doesnt it hurt when I cut my hair? Why does wood float? Why does iron sink? Why doesnt an iron ship sink? on through the maze of thousands of puzzling questions which occur to the childs mind. It has grown until the answers to the mere questions cover practically the entire range of every-day knowledge, and has been arranged in such a form that any child may now find the answer to his own inquiries. As the mind of the child matures, the questions naturally drift toward the things which the genius of man has provided for his comfort and pleasure. We have become so accustomed to the use and benefits of these wonders produced by man that we generally leave out of our books the stories of our great industries, and yet the mind of the child wonders and inquires about them. We have so long worn clothes made of wool or cotton, that we have forgotten the wonder there is in making a bolt of cloth. Every industry has a fascinating story equal to that of the silkworm, which moves is head sixty-five times a minute while spinning his thousand yards of silk. Can you tell What happens when we telephone? How a telegram gets there? What makes an automobile go? How

man learned to tell time? How a moving-picture is made? How a camera takes a picture? How rope is made? How the light gets into the electric bulb? How glass is made? How the music gets into the piano? and hundreds of others that embrace the captivating tales of how man has made use of the wonders of nature and turned them to his advantage and comfort? The Book of Wonders does this with illuminating pictures which stimulate the mind and give a birds-eye view of each subject step by step. Where shall such a book begin?
